

# ASSIGNMENT-I

## TECHNOLOGY- ARTIFICIAL INTELLIGENCE

### DOMAIN- VirtualEye - Life Guard for Swimming Pools to Detect Active Drowning

#### Question-1:

Write a program which will find all such numbers which are divisible by 7 but are not a multiple of 5, between 2000 and 3200 (both included). The numbers obtained should be printed in a comma-separated sequence on a single line.

#### Solution:

```
l=[]
for i in range(2000, 3201):
    if (i%7==0) and (i%5!=0):
        l.append(str(i))
print(','.join(l))
```

# OUTPUT

```
main.py
1 l=[]
2 for i in range(2000, 3201):
3     if (i%7==0) and (i%5!=0):
4         l.append(str(i))
5 print(','.join(l))
```

## Question-2:

With a given integral number  $n$ , write a program to generate a dictionary that contains  $(i, i*i)$  such that  $i$  is an integral number between 1 and  $n$  (both included). and then the program should print the dictionary.

Suppose the following input is supplied to the program:8

Then, the output should be:

{1: 1, 2: 4, 3: 9, 4: 16, 5: 25, 6: 36, 7: 49, 8: 64}

## Solution

```
number = int(input("Type a number : "))
```

```
numberDict = {}
```

```
for i in range (1,number+1):
```

```
    numberDict[i] = i*i
```

```
print(numberDict)
```

## OUTPUT

The screenshot shows a Python IDE with a file named 'main.py'. The code in the editor is as follows:

```
1  
2 number = int(input("Type a number: "))  
3  
4 numberDict = {}  
5 for i in range(1, number+1):  
6     numberDict[i] = i*i  
7  
8 print(numberDict)  
9
```

The 'Run' button is highlighted in blue. The 'Shell' pane on the right shows the output of the program:

```
Type a number: 8  
{1: 1, 2: 4, 3: 9, 4: 16, 5: 25, 6: 36, 7: 49, 8: 64}  
> |
```
